

Daniel Klie

Senior Full Stack Engineer

Argentina | danielnswz@gmail.com | [LinkedIn](#) | [GitHub](#)

1 Summary

A highly skilled Senior Full-Stack Software Engineer with over 8 years of commercial experience designing, scaling, and maintaining robust web architectures, scalable backends, and intelligent distributed systems. Expert in modern JavaScript/TypeScript ecosystems (React, React Native, Node.js, NestJS), cloud infrastructure (AWS, CI/CD), NoSQL/SQL data stores, and augmenting software development through AI-assisted workflows and multi-agent AI orchestration pipelines. Proven track record of leading technical engineering initiatives, coordinating cross-functional delivery across product, design, and development teams, and delivering high-impact software solutions for the fintech and digital retail industries.

2 Skills

- **Languages and Frameworks:** JavaScript, TypeScript, Node.js, Go (Golang), PHP, React, Next.js, React Native, Preact, Angular 6+, AngularJS, NestJS, Laravel, Redux, Redux-Thunk, Redux-Saga, Apollo GraphQL, Micro-frontends (Module Federation), TailwindCSS, SCSS, Stylus
- **OS & Platforms:** AWS (Lambdas, Serverless Framework, S3, SQS, SES, Cognito), POS terminals, Hardware SDKs
- **DBMS:** PostgreSQL, MySQL, Redis, Sequelize ORM, MongoDB, Mongoose ODM
- **SCM, Build, CI/CD:** Monorepo (NX), GitHub Actions / CI/CD Pipelines, RabbitMQ, REST APIs, OAuth2
- **Other:** Software Design Patterns, Legacy Modernization, Agentic AI Tools (Claude Code, Codex, GitHub Copilot), Native SDK Bridges, Dependency Injection, Re-select, Flex-Layout, Metrics & Charts Libraries, Multi-agent AI Orchestration (LLM Tool Calling, SSE Streaming)

3 Employment History

AutoFi	2021 – Present
<i>Full Stack Developer</i>	<i>Remote</i>

- **Project Scale:** Rearchitected, scaled, and maintained high-throughput microservices and public-facing APIs supporting a premier automotive digital retail platform. Processed thousands of daily financial transactions and complex multi-party lender/dealership integrations across North America while maintaining high platform availability.
- **Key Impact:** Modernized legacy backend monolith bottlenecks into asynchronous microservices, reducing service latency and API response times. Engineered a Session Service with custom Multi-Factor Authentication (MFA) from requirements gathering to full implementation, successfully mitigating critical automated attack spikes. Integrated agentic AI development tools (Claude Code, GitHub Copilot) into CI/CD pipelines for automated code reviews and boilerplate generation, boosting engineering velocity and improving codebase test coverage.
- **Activities & Responsibilities:** Architected and maintained high-traffic consumer applications and scalable APIs for a premier digital retail platform in the automotive industry; leveraged Micro-frontends (Module Federation), GraphQL, Go, and RabbitMQ to optimize system modularity, UI performance, and asynchronous communication; acted as Subject Matter Expert (SME) across core microservices, providing technical guidance, clear documentation, and cross-team knowledge sharing.
- **Technologies:** JavaScript, TypeScript, React, Preact, Redux, Redux-Thunk, Apollo GraphQL, Node.js, Next.js, NestJS, Monorepo (NX), RabbitMQ, Micro-frontends (Module Federation), Redis, MongoDB, Mongoose ODM, GitHub Actions / CI/CD Pipelines, REST APIs, OAuth2, Agentic AI Tools, TailwindCSS, SCSS, Stylus

SweatWorks	2020 – 2021
<i>Full Stack Developer</i>	<i>Remote</i>

- **Project Scale:** Built a backend serverless architecture that sustained massive traffic spikes and concurrent telemetry updates from thousands of active participants during nationwide live corporate race events.
- **Key Impact:** Eliminated latency bottlenecks and database crashes under peak load by shifting heavy synchronous workloads into event-driven queues, maintaining 99.9% platform uptime during nationwide live events.
- **Activities & Responsibilities:** Developed and scaled a Corporate Challenge Race System utilizing a serverless architecture with AWS Lambdas and Node.js; implemented critical cloud infrastructure including AWS Cognito for authentication, SQS for queuing, and a Redis-based rate limiter to handle high-throughput traffic spikes safely; designed relational schemas and data access layers with Sequelize ORM to ensure ACID operations.
- **Technologies:** JavaScript, TypeScript, React, Redux, Redux-Thunk, Re-select, Node.js, Serverless framework, AWS (Lambdas, S3, SQS, SES, Cognito, ElasticCache), SQL, Sequelize ORM, REST APIs, Redis, SCSS

Cognizant Softvision

2019 – 2020

Senior Software Engineer

Argentina

- **Activities & Responsibilities:** Led the engineering team in developing a robust sales application, collaborating closely with product and design to translate concepts into technical requirements and drive end-to-end feature delivery; coordinated with cross-functional technical leads to ensure technical alignment across pods; architected custom native bridges to establish seamless device communication between the mobile app and specialized hardware SDKs (POS terminals, printers, and mounting stands).
- **Technologies:** JavaScript, TypeScript, React, React Native, Redux, Redux-Saga, Re-select, SQL, POS terminals & Native SDK Bridges, Dependency Injection

Fortesza

2018 – 2019

Front-end Developer

Remote

- **Activities & Responsibilities:** Developed a multi-user crowdfunding platform tailored for corporate financing, building complex administration panels for both investors and companies; spearheaded the migration of the core web application to Angular 6+, leveraging reactive forms, Flex-Layout, and advanced charts libraries to maximize data visualization and frontend performance.
- **Technologies:** JavaScript, TypeScript, Angular 6+, Flex-Layout, Reactive Forms, Metrics & Charts Libraries, Laravel

Zonngo

2017 – 2018

Back-end Developer (Project-based)

Remote

- **Activities & Responsibilities:** Designed and delivered a secure Node.js backend, REST APIs, and OAuth server components for a retail price monitoring platform.
- **Technologies:** JavaScript, Node.js, MongoDB, Mongoose ODM, MySQL, REST APIs, OAuth2 (Client & Server)

Agentes Informáticos, C.A.

2015 – 2016

Full Stack Web Developer (Project-based)

Trabajo Remoto

- **Activities & Responsibilities:** Engineered dynamic inventory web software applications utilizing PHP Laravel and AngularJS.
- **Technologies:** JavaScript, PHP, Laravel, AngularJS, MySQL, Eloquent ORM

Seguros Caroní, S.A.

2016

Professional Internship

Puerto Ordaz

- **Activities & Responsibilities:** Engineered health insurance management databases and supporting internal software workflows.
- **Technologies:** MySQL, SQL, Database Design

4 Education

Universidad Nacional Experimental de Guayana
Ingeniería Informática

2012 – 2018

5 Languages

Español: Native | **Inglés:** Full Professional Proficiency
